Commie Killers Abound?

Commodore users are people, too. People kill, and are alleged killers. Not surprisingly, plenty of criminals have used the 12-15 million C-64s which have probably touched 60 million hands in trade. According to LOADSTAR's Washington DC source, Bernard Sussman, Timothy McVeigh, accused Oklahoma City Bomber, made a little money using his C-64 at one time. He's pictured here from his 1988 yearbook of the U.S. **Army Infantry Training** Center in Fort Benning, Ga. McVeigh is charged with constructing a two-ton bomb of ammonium nitrate and fuel oil that was detonated April 19 in front of the

Oklahoma City, Okla., federal building, the deadliest act of terrorism U.S. history.

George Trepal, alias The Mensa Murderer, was another commodore user who went postal. You can read about is antics in *Poison Mind* by Jeffrey Good and Susan Goreck. Morrow, \$22.

October 1988, in the small central Florida town of Alturas, a 41-year-old waitress named Peggy Carr succumbed to symptoms doctors were unable to explain. Her feet burned, her hair started falling out, she couldn't speak or open her eyes. Within

days she lapsed into a coma from which she would never awaken. Her son and stepson, both healthy teen-agers, and

Reduce Computer Eye Strain

Whenever my wife catches me computing in the dark, she tells me to to turn on the lights. She claims that I need the light or I'll strain my eyes. I never understood this concept. The only time my eyes feel tired is during allergy season. So I tell her, "Honey, the monitor is a light.

Ambient light only fights *against* the monitor."

She throws up her hands and tells me I should know better. Well now I have vindication. I was led to the following URL by chance, and found a wealth of information. Internet surfers might want to

(Continued on page 2)

"My 28.8 BPS modem and Novaterm 9.6 are however the newest and best that are available. For text use of the Internet, there is not another computer platform that can match my system's capabilities."

NovaTerm 9.6 Review

by John Elliott. I obtained the earlier version of Novaterm when I bought from PPI a 28.8 bps modem for my c64. I already had the Swiftlink interface cartridge which would let me use the faster modem with my computer, but did not have software that would work at that speed over phone lines. Flow Control Novaterm permits control of speed from 300 to 34,400 bps (the Swiftlink speed). Once modem speed passes 9,600, the command bar disappears so that incoming text can be handled more easily.

My screen was filling up so quickly with text at the faster speed that it became illegible due to over printing. Nick reminded me to use the flow control switch in the menu. When this automatic adjustment to my c64 speed took place, everything was readable.

Screen color, text fonts and line length are menu adjustable for ANSI (Commodore color bulletin boards with graphics), and the more standard VT 102 40 and 80 column screens.

A buffer is created which can act as an intermediary between the disk drive and the modem. Files can be sent from the drive or computer to the buffer before going on line so that the speed advantage of the

Wayne Worlie: Reader Of The Month

Wayne Worlie was born 2-27-27 in South Dakota. Now he's a retired rail worker (since 1981) living in Miles City, Montana. In 1983 his son asked him, "Dad, why don't you have a personal computer?" Wayne responded, "What would I want with one of those? Punch in 2+2 and get 4?" His son went ahead and purchased a C-64 for Wayne on the Christmas of 1983. Wayne begrudgingly accepted the gift, and struggled with it until February 27, 1984, when again his son dropped hardware on his lap. This time it was a 1571 disk drive. At this, Wayne said, "now we're cooking!"

Computing became loads easier for him and he became an avid computerist. He now owns every LOADSTAR there ever was, and a good portion of most C-64 titles ever

published.

Send your photo and bio to LS Letter Reader of the month: 606 Common Street, Shreveport, Louisiana 71101

Here are the most common posts found in comp.sys.cbm according to a few of its readers.

From: jamesch@ix.netco m.com (ChrisC)

I can't get Such'n Such program to work. What's wrong with it?

(notice absolutely no info as to what the problem is or what type of system it's running on)

Another favorite...

Somebody@some where.else wrote

> Can someone please tell me what POKE I need to change the background color?

Well, the background is controlled by the VIC chip. it is a complicated piece of equipment that will take the digital data from the computer and convert it to a video signal. Now the functions off all the registers are such

<SNIP>

...And that's everything you wanted to know about the VIC. I sure hope that helps. Any more questions, just ask.

>Yes, I have one question, What is the POKE for changing the background color?

A Few Computer Rip-offs

When you think of ripoff, you don't usually think of computer services.
After all, computers are a sterile, white-glove field. The

only computer criminals are hackers, right? In 1984 I sent off \$21 of my church's money to a Commodore Software Club and they flew south with the cash. But that falls under the category of mail order rip-offs, not necessarily computer rip-offs.

Computer rip-offs are a different animal in my mind. To me a computer rip-off is a scheme where a company charges you unnecessarily and blames it on computer processing. The fee was invented to squeeze more money out of unsuspecting customers. I often mentally replace fee with "because you'll pay it if we call it that." Mr. Jones, on top of your \$40.00 phone bill, we just billed you for that newfangled touch tone thingy because we know you'll pay it if we call it that.

We've all seen that commercial where Nick and Rob will find your lost family members and friends for \$39.95 + \$10.00 processing fee if you call their 800 number. The service is legitimate, but why charge an additional \$10 processing when your entire business is processing? Why not just charge people \$49.95. heck, call a spade a spade and say \$50.00! Because we know you'll pay it if we call it processing!

How about a toner cartridge packed with a new printer that's only a third full, ensuring a \$100 refill.

For months now Judi's laser printer had been warning, "drum near end" until finally last week it refused to operate.

Eyestrain Continued...

(Continued from page 1) visit

http://www.inforamp.net/ ~poynton/notes/ reducing eyestrain/index.html

Charles A. Poynton does an authoritative job of explaining eye strain, and tells in detail how to prevent it in a few easy steps. He is a Fellow of the Society of Motion Picture and Television Engineers. He participates in several SMPTE standards committees, and in 1994 was awarded the Society's David Sarnoff Gold Medal for work to integrate video and computing technology.

He states that our computing environment should minimize stress, and he gives these guidelines with the monitor turned *off*:

- Minimize reflections
- Control ambient light
- Establish a suitable surrounding
- Establishing a comfortable viewing distance.

To test your screen for annoying reflections, turn off your monitor. Sit in your normal viewing position and inspect the dark screen for reflections. Try to arrange your environment so that you can see no intense light sources reflected from your screen. If you can't move the furniture, block your (reflected) view of the offending object with dark cardboard baffles.

There is much *much* more information at the site. Check it out! \square

>I would say also, "WHAT IS THE STATUS OF SLIP FOR THE 64" is up there

Another category is needed for 'Is there a WWW Browser for the C64" and "How do I hook up an IDE drive to my C64".

They are clockwork questions: if its been long enough since it was asked, you just know its going to come up again. Another clockwork question is "Can I run a C64 off of [12/6/5] volts without [damaging/burning down/frying] my [car/house/C64]? It came up recently, it probably won't come up for a little while yet.

... but like the shark in Jaws, you know its just biding its time.

From: Paul Allen Panks pap@dana.ucc.na u.edu Northern Arizona University

- 1) For sale posts (mostly people wanting to buy a C64 or 128)
- 2) Posts about how a program won't load or run, but no descriptions of what system it runs on or what the software name actually is, in some cases.

Killers Continued...

(Continued from page 1)

her 2-year-old granddaughter suffered from similar symptoms.

Medical examiners traced the illness to a rare element, *thallium*, banned in the US since 1972. It had been planted in an eight-pack of Coca-Cola Naturally the police first suspected Peggy's husband, Pye Carr, who was having an affair at the time, and was rumored to have taken out large insurance policies on Peggy and their sons.

But when detectives interviewed George Trepal, the Carr's neighbor, Trepal was not only unsympathetic over the demise of his neighbor, but expressed lingering anger over their loud music and unruly behavior.

When asked by policemen why anyone would want to poison the Carr family, Trepal answered, "To get them to move," parroting an anonymous letter the Carrs had received months earlier: "Move out of Florida forever or else you all die."

George Trepal may have been a high-IQ computer specialist, but he talked too much. I did a search for his name on Usenet and an Amiga program popped up. I couldn't find any C-64 programs written by him, but I did find that he had a past conviction for manufacturing illegal drugs. He fit the psychological profile of a poisoner (passive, avoiding direct confrontation), but was too smart to leave any direct evidence of his crime. In the end he was brought to justice.

Now the only question is did OJ ever use a C-64? \square

Novaterm Continued...

(Continued from page 1) non-mechanical virtual drive can be used. Both reads (one line at a time) and up and downloads can take place between the modem and buffer as well as between drive and modem. Up and downloads require error checking. With Novaterm I can select among kermit, z modem and y modem. Your destination must also use the same error checking method for you to use the checking protocol available on your menu.

These features can be controlled while on line either by calling the memory resident help menu or by temporarily leaving the terminal mode to adjust parameters, work with your drives or use the text editor.

Novaterm 9.6

The new Novaterm retains the above features, enhances some, and adds a suite of additional facilities.

I have used kermit and z modem to download large files. Z modem is many times faster. Y modem can now be used for

both up and downloading. Since it allows "streaming" rather than sending in chunks of data, there is a speed advantage. Although I would like to use y modem, my shell provider does not offer that feature.

The new disk and buffer modes both offer a number of additional features. I can with a menu system do batch saves and deletes of disk files from either mode.

I can also do uudecode/ uuencodes from either mode.

(Continued on page 5)

Rip-offs continued...

(Continued from page 2) Judi paid \$200.00 to replace the drum. This expired drum worked fine all the way until the last page. It says in the manual that the original drum would print 3000 pages, which is about right, but the replacement would print 30,000 pages. Anyone feeling paranoid with me? Here we have a working computer device that refuses to work until the manufacturer gets another \$200. I would wager that the replacement was the same as the original except that the replacement either had no counter or was set for 30.000 before it refuses to work.

I have to work with service bureaus (people who own \$50,000 printers) in order to print photographic quality images from my work. My pet fee? "Raster Image Processing," which is affectionately termed the RIP in the industry. Before a service bureau can print my images on a color laser or a dye sub printer, they first rasterize it (show it on a TV) and that costs \$14.00 locally. I think RIP-off and fee go hand in hand. I have to pass this fee on to my customers. I call it a "per digital pose fee" because I know they'll pay it

if I call it that.

Oh yeah, I forgot to mention that a RIP program sells for "only \$2995.00." A legitimate cost is being passed onto me — perpetually mind you, but granted, a cost once incurred.

I just wish people would earn their killing like they used to in the good old days instead of blaming computers. Meanwhile I pay \$X.95 per month for an array of ethereal services, and the occasional labor fee from Ma Bell: a \$22.95 "connection fee" for an operator to cursor over and press RETURN.

We have outgrown our present facility

We have outgrown our present facility and will be moving to a much larger location as of June 1, 1996. I would personally like to thank Commodore users from all over the country for contributing to the success and growth of Centsible Systems.

Comp.sys.cbm Q&A:HP Printers with GEOS?

David Matheson wrote: I have been looking at printers lately and have found a good deal on some HP desk jets. Are these printers compatible with GEOS? Are there drivers for them out there? Do they have Epson emulation modes? I need to know before I buy one. Bo answered: As far as I know, the answer is no, no, and no. I have a HP Deskjet 540 I use on the damn PeeSee I own, and have been trying for ages

to get it to work with my 128D. Not geoCable, not my printer interface-- nothing has made it go. - Bo

David Tuomi responded: I own an HP500 that I use with my 64/128. I have an Epson emulation cartridge that HP made a few years back. It seems to work fine with a Super Graphics Gold interface. But somehow an HP running an Epson emulation, with a interface card that is running a

Commodore emulation, seems rather inefficient. It works fine, though, and is certainly a tribute to the ruggedness of the emulations in place within these two devices.

Jeff states: HP printers use a language which has very powerful drawing commands like postscript. When a printer emulates, it's no big deal technically its "native" mode is just another emulation or protocol. 🖫

Novaterm continued...

(Continued from page 3) This means that I can perform these operations on files which are either in the buffer or drives. Uuencode/ decode is an important process on the net. It converts binary files into text for easy sending. All computers can receive them. Decoding programs specific to each platform convert them to their original image (gif etc.) or text form. This technique makes it possible to also send images or preformatted text by e-mail. I own two earlier uudecoders (Fuzzy Fox's and Ace's) neither of which could I get to work. Novaterm 9.6's version not only works for me, but also encodes for sending.

Like the Big Blue Reader, Novaterm 9.6 converts between ASCII, Pet ASCII, and standard Commodore screen mode and saves the result. The text editor directly reads whatever has been downloaded or captured. While it lacks many word processor features, it can read and operate on files many times larger than what can be worked with by any Commodore word processor. Since many text files downloaded from the Net are over 100 blocks, this feature is very important, especially with a c64. It's about time!

I finally have a program besides GEOS that will use my PPI real time clock (and all other available Commodore clocks). Automatically on loading I can see in the top margin both the time of day and elapsed time. Data and time stamping does not

take place.

Novaterm 9.6 can be configured to all Commodore compatible modems from 300 BPS up, and to all interfaces including CMD's SwiftLink for the faster modems.

Most amazing to me was what Nick had done to his buffer. As before, either a section of computer memory or a ram expansion unit can be designated as the buffer. If only computer memory is used, only 8k is available. For larger files, the workaround is that autosaves take place between to disk as the buffer fills. Since my REU has 512k, I have turned this feature off. The buffer is now treated as a real drive with its own ability to load from and save to disk. Earlier Novaterm versions required that a disk copy module be loaded to accomplish

Novaterm 9.6 Review

(Continued from page 5) those tasks.

I now also have alternate buffer sources. GEORAM and BBGRAM were designed to work only with GEOS. They will also work as ram memory for non GEOS functions if attached to the REU port of a RamLink. Nick has configured Novaterm so that it can use either cartridge as buffer memory. My storage capacity would jump to 2 megs and be nonvolatile if I were to use my BBGRAM instead of my 1750 REU. This week I bought a 128D. Novaterm will also use its extra 64k video memory as a huffer

Since Novaterm does not reinitialize the buffer on reloading, the buffer stays intact if Novaterm is left, a separate program is run, and Novaterm is reloaded. This can all happen while you are still on line. As an experiment, I have downloaded a gif to disk, left Novaterm, run a gif decoder, viewed the gif and returned to Novaterm without interrupting my on line session. Since with JiffyDOS it loads from my 1581 in about 20 seconds, the small gifs can be captured, viewed and the user can continue working on the Net in less than five minutes. Netscape 1.0, Minuet and PC Lynx all initially used this approach to handle gif viewing. An external gif viewer was called whenever an image file was met.

During this entire process, whatever I had placed in the buffer remained. With a BBU or BBGRAM, the buffer would remain intact whether the computer was on or off.

With my JiffyDOS equipped 1581, I am in terminal mode with Novaterm in 20 seconds. When I take the time to learn its scripting language, one key stroke will then dial my shell provider, access my mail, and Telnet to my browser provider. For the moment, I have assigned key commands and pass words to my function keys, so that

typing is kept to a minimum.

Although much of my email is stored in my file area of my shell, I capture to buffer whatever I want to later edit or print out. If while on the Web with Lynx I come across an image or text file I wish to download, I can expect to take up to 2 seconds for each k. A 120 k image file is not uncommon, and will take me four minutes to place in my buffer. At the best time of day, my PC at work would match this speed.

My browser provider tells me they are using for those of us who Telnet in, something faster than a T1 line (which is faster than any modem). I have a 28.8 BPS modem from PPI that will also let me use GEOfax. My SwiftLink works at 38.4 BPS. The time to go from power on to terminal mode with JiffyDOS and Novaterm is less than the time it takes my PC to scroll its configuration information across the screen. While cursor speed seems to be affected by how good a day my server is having, and how heavy the traffic is, downloading and moving among Web links seems to be equally fast at all times of the day, no matter how heavy the traffic.

My equipment is state of the art. I bought my 1990 Swiftlink from Doctor Evil originally to help null modem transfers. My REU is the same age. My 28.8 BPS modem and Novaterm 9.6 are however the newest and best that are available. For text use of the Internet, there is not another computer platform that can match my system's capabilities.

Even when Commodore users have access to a fully functioning slip and graphical browser, we will need Novaterm 9.6 to make the connections and "remember" what we have found. By the way: My more experienced 128 friends tell me they are most excited by the support of the fast mode 80 column screen in terminal mode.

Novaterm 9.6 is available on either 1541 or 1581 disk for US\$29.95. There is also a 90 page user's manual. Send check or money order to:

Press a key and save the graphic you want in 2-block, 3-block and even PRINTMASTER graphic files! All that plus a printed guide! Earch volume is \$20.00. Vol. 1: C64/128 3.5-inch disk item #0009d5, Vol. 2 (graphics from past L5 issues): C64/128 3.5-inch disk item #0002d3. 5.2.5-inch disks item #0010d5.

Diskfulla Card Games! The Compleat Maurice: A compilation of 26 solitaire card games written by Maurice Jones, the acknowledged master of card game simulations for the C64/128. There's even a brand new, never before published game called Boomerang. Two 5.25 inch disks #0007D5 or one 3.5 inch disk #0007D3.

Oodles Of Stunning Art! Tutorials! The Compleat Walt: During LOADSTAR's first ten years

we have published 24 of Walt Harned's slideshows and sidesnows and multimedia events. Now we've gathered them into one huge collection: seven 5.25 inch disks or three 3.5 inch disks! There are more than 250

pictures, including some that have never been published. It may be the greatest one-man collection of art on any computer platform. 5.2.5-inch disks order #070425 3.5-inch disks order #070423, \$20,00 postage paid!

GEOS CLIPART

LOADSTAR presents a huge GEOS collection of clip art and fonts. All of the GEOS art that's ever appeared on LOADSTAR, as well as some great files from GEOS fanatic Dick Estel, are available on twenty 5.25 to be distincted to the control of the co GEOS fanatic Dick Estel, are available on twenty 5:25 inch disks or eight 3.5 inch disks. Most of this has never been seen before! Use these graphics in your GeoPaint, GeoWrite and GeoPublish documents or convert to FGM with FGM utilities. Splif up your GeoFAX documents with the appropriate graphic every time! Prices are \$20 for any two 3.5 inch disks, or any five 5:25 inch disks. You can purchase the whole collection for \$75 for either version.

5.2.5-INCH DISKS

Disk 01 RAILS: Railroad art from Europe/USA #0012D5

Disk 02 VEHICLES/TAROT: Artwork of old and new autos; excellent GeoPaint drawings of the Tarot card set #0013D5

Disk 03 CLIP ART: Includes converted MacPaint files that have never before been available in Commodore format #0014D5

DISK 04 OTTAWA/PRIME CLIPS: Artwork of the main landmarks of Ottawa. in addition, high quality public domain clip art #0015D5

Disk 05 FONTS: More than 30 fonts from past issues of LOADSTAR, plus articles (in GeoWrite format) on creating fonts. Also two ready-made headers for use with your own documents, one a picture of a mail truck; the other reading "FROM THE DESK OF" #0016D5

Disk 06, Disk 07, and Disk 08 GeoPaint and Photo Album files with the great clip artwork featured on past LOADSTARS includes GeoCurmudgeon. Anamalla I and II, Australlan Animals, Valentine art and many more #0017D5, #0018DS #0019D5 #0018D5, #0019D5

Disk 09 GOODYKOONTZ FILES: Jasper Goodykoontz, born in Indiana in 1855, produced Goodykoontz's Perpetual Calendar and General Reference Manual (A Book for the Millions). This disk includes scans from the book of a wide array of subjects Gestures and Attitudes, Poultry, Craniology, and more. #002005

Disk 10 OLD WEST: Scanned Artwork from Dick Estel's FRD Software mostly woodcut style art of the old west, gold rush days and pioneer scenes. #0021D5

Disk 11 J. Needy Art/Animals: Jennifer Needy works with a wide variety of subject matter and materials. Disk contains some of her favorites, scanned into GeoPaint format. Side two is a collection of scanned artwork of animals from FRD Software #0022D5

Disk 12 HOLIDAY: Artwork for New Years, Valentine's, St. Patrick's Day, Halloween, Thanksgiving and Christmas #0023D5

Disk 13 PEOPLE/FACES: Scenes of people and faces from FRD Software #0024D5

Disk 14 FRD CLASSICS: Dick's choice of the best of the FRD collection #0025D5

Disk 15 DINOS/CLASSICS: Dinosaurs and other prehistoric beasts, as well as more first choice artwork from FRD. #0026D5

Disk 16 SPORTS/MISC: Dozens of sports related clips #0027D5

Disk 17 OFFICE AND SCHOOL: Clips to be used at work and around the house #0028D5

Disk 18 MUSIC & MORE SCHOOL CLIPS

Disk 19 SEASONAL AND HOLIDAYS: A clip for any occasion #0030D5

Disk 20 SEASONAL AND HOLIDAYS: A clip for any occasion #0031D5

3.5 INCH DISKS

The 3.5" disks are roughly equivalent to two and a half 5.25" disks.

Disk 1: Equals disks 1, 2, 4B #0009D3

Disk 2: Equals disks 3, 6, 7A #0010D3

Disk 3: Equals disks 5, 8, 7B #0011D3 Disk 4: Equals 9, 10, 11A #0012D3

Disk 5: Equals 12, 13, 11B #0013D3

Disk 6: Equivalent of Disks 14, 15 and some bonus files not on 5.25" disks #0014D3

Disk 7: Sports, Office and school, Music #015D3 Disk 8: Music, Holiday and Seasonal #016D3

For your convenience, GeoViewer is included. GEOS 2.0 suggested.

Increase Speed Up to 1500% while retaining 100% compatibility

- Speeds up Loading, Saving, Verifying, Formatting and Reading/ Writing of Program, Sequential, User and Relative files unlike cartridges which only speed up Loading and Saving of PRG files
- Built-in DOS Wedge plus 17 additional features including file copier, text dump, printer toggle, and redefinable function keys make using your computer easier and more convenient
- ROM upgrade installs easily into most computers and disk drives. Supports C-64, 64C, SX-64, C-128, 128-D, 1541, 1541C, 1541-II,1571, 1581 and more.

FDSeries

1.6 MB 3.5" Floppy Drives

The FD-2000 disk drives utilize today's latest 3.5 inch disk drive technology. FD-2000's support 800K (1581 style) and 1.6 MB (High Density) formats. Fast and reliable, they

support 1541, 1571 and 1581 style partitions, Native Mode partitioning and can actually read and write 1581 disks. FD's feature built-in JiffyDOS, SWAP button and optional Real Time Clock. High capacity, speed and compatibility make the FD right for every application, including GEOS.

Power-Backed Expandable REU

The fastest possible form of storage, RAMLink provides instant access to files and retains data while your computer is turned off. Easy to use and expandable up

to 16 MB, RAMLink utilizes the same powerful operating system found in CMD Hard Drives. Unlike Commodore REU's which are compatible with less than 1% of commercial software, RAMLink supports more than 80% of the commercial titles. RAMLink also offers built-in JiffyDOS Kernal, SWAP feature, reset button, enable/ disable switch, pass-thru port and RAM port for REU/GEORAM use. RAMLink offers maximum speed, expandability and compatibility with all types of software and hardware including GEOS.

HD<u>Series</u>

SCSI Hard Drive for the C-64/128

HD Series Hard Drives are available in capacities up to 1 GB, are fully partitionable, and can emulate 1541, 1571, & 1581 disks while Native partitions utilize MS-DOS-style

subdirectories. HD's connect easily to the serial bus or parallel via RAMLink, Includes built-in JiffyDOS, SWAP feature and RTC. HD's offer superior compatibility with most commercial software including BBS, Productivity and GEOS. And with new pricing, HD Series drives offer the lowest cost per megabyte of any C64/128 storage device.

Shipping and Handling Charges
